

Before starting the modifications, we must have a backup of the current website source code. Also, while working on the modifications, the website must not be distracted because we will launch on 11<sup>th</sup> of April which is right before any modifications are done. Once a milestone is done then we update the website. Please breakdown the price and duration for each milestone. Note that if you provide a high quality job, on time, with a reasonable price, we will always work with you in the future modifications.

## Milestone 1

1) Currently, my website has only 1 language (English) I want my website to have 2 language options: English and Arabic. (I will provide the translation for all words)

2) When you click on the "JOIN NOW" button you will see the registration form, I want to add a "Phone Number" field after the email and password, and to be able to see all users' phone numbers from the back **end only**. Note that phone numbers must be mandatory for all users.

3) When freelancers finish a task and recruiters give their reviews, the amount of the freelancers who are hired remains zero. I want freelancers to receive their amount at their profile immediately once they are reviewed by recruiters. For example, Rosnet hired sultan al maskari and gave a review but sultan al maskari still has zero in his pending/available balances.

## Milestone 2

4) Real time chat is enabled but it's not working. I want users to communicate with real time chat

5) Disable user account verification for **Recruiters**. Note that user verification for service providers must remain.

6) When a user receives a proposal, I want there to be a notification like when a new message is received. Also, when a service provider is hired, he must get a notification.

7) When a recruiter registers, the only mandatory fields are first name, e-mail, and phone number then their profiles must be immediately functional without any verification from the admin. On the other hand, service providers must fill mandatory fields such as first name, E-mail, phone number, profile picture, languages, location, and skills. Then after service providers fill all mandatory fields, they must wait for verification from the admin.

8) When using English language, the currency must show OMR not ر.ع. (which is currently shown besides the currency).

## Milestone 3

9) Currently, When a service provider clicks on "send proposal" on a task he already sent a proposal for, it will let him. And after filling the form it will tell him that he already sent a proposal for this task. I want that when he tries to click on the button "send proposal" for a task he already sent proposal, the button to be disabled and indicate that he already sent a proposal, so that a user will not waste time filling out the form and then the website tells him he already sent a proposal
